

RITISH SAINI

Backend Developer | Python | FastAPI | GenAI/LLM Applications

Fremont, California | +1 (341) 252-9377 | ritishsaini1995@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)
U.S. Work Authorization: Green Card Holder

SUMMARY

Backend Developer with production experience building scalable REST APIs and multi-tenant systems, and hands-on experience building GenAI-powered applications using Python, FastAPI, and LLM APIs. Skilled in PostgreSQL, Redis, Elasticsearch, Celery, retrieval-based workflows, and prompt engineering, with a focus on performance, reliability, and applied AI engineering.

SKILLS

Languages: Python, SQL, Java, JavaScript

Backend & APIs: FastAPI, REST APIs, JWT Authentication, OAuth2

GenAI & LLM: RAG, LLM API Integration, OpenAI API, Gemini API, Claude API, Prompt Engineering

AI Development Tools: Cursor, Claude Code, GitHub Copilot, MCP

Databases: PostgreSQL, MongoDB, SQLAlchemy

Search & Caching: Elasticsearch, Redis

Background Jobs & DevOps: Celery, Docker, Git, CI/CD, Sentry

Engineering: System Design, API Design, Performance Tuning, Debugging

PROFESSIONAL EXPERIENCE

Backend Developer — Wizcommerce

Gurgaon, India | Apr 2025 – Sep 2026

- Built and maintained **30+ REST APIs** using **FastAPI**, improving data retrieval speed by **30%**.
- Designed a **multi-tenant backend** so each client's data stays private and isolated, while keeping the system easy to scale.
- Added **Elasticsearch**-based search, cutting search response time by about **40%**.
- Used **Celery** to run long-running tasks in the background, keeping the API fast and responsive for users.
- Improved **PostgreSQL** queries and **SQLAlchemy** code, reducing database load by **25%**, and set up centralized logging with **Sentry** for faster issue detection.

PROJECTS

LabLedger — Lab Report Reader & Health Tracker

[GitHub](#)

- Built a tool that reads lab report PDFs from any lab, extracts each test result, and matches it to a standard medical code (**LOINC**) through a matching pipeline that falls back to an **LLM** for ambiguous cases, flagging critical or fast-changing values.
- Built the backend with **Python**, **FastAPI**, and **MongoDB** with a background worker for uploads, plus **role-based access** (owner, clinician, nurse, viewer), audit logging, and two-factor login to protect medical data.

Recur — Subscription Tracker with MCP & Vector Search

[GitHub](#)

- Built a tool that reads a bank statement CSV and detects recurring subscriptions, price increases, and duplicate charges, with no bank login or credentials required.
- Built a semantic matching layer with **vector embeddings (pgvector)** to catch merchant names that share no text (e.g., "AWS" vs "Amazon Web Services"); measured its accuracy against real data and removed it once results showed it wasn't reliable enough to ship.
- Built a remote **MCP server** secured with **OAuth 2.1** and PKCE so AI assistants can query subscription data safely, with per-user data isolation enforced at the database level.

AI Quiz Platform (QuizNest)

[Live Demo](#)

- Built a full-stack quiz app with email/password login, **Google sign-in**, and role-based access for students and admins, backed by **REST APIs** and **MongoDB** models for quizzes, scores, and progress.
- Integrated the **Gemini API** with structured prompts to auto-generate quiz questions on any topic and automatically grade written answers.

EDUCATION

B.Tech in Computer Science Engineering — Chitkara University, India

2022 – 2026

CGPA: 9.02
