

RITISH SAINI

Backend Developer | Python | FastAPI

Fremont, California | +1 (510) 894-9093 | ritishsaini1995@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

Backend Developer with hands-on experience building REST APIs, multi-tenant systems, and background data processing using Python and FastAPI. Comfortable working across PostgreSQL, SQLAlchemy, Redis, Elasticsearch, and Celery to build backend systems that are fast, reliable, and secure.

SKILLS

Languages: Python, SQL, Java, JavaScript

Backend & APIs: FastAPI, REST APIs, JWT Authentication, OAuth2

Databases: PostgreSQL, MongoDB, SQLAlchemy

Search & Caching: Elasticsearch, Redis

BackgroundJobs: Celery, Asynchronous Processing

Tools & DevOps: Docker, Git, CI/CD, Sentry

Other: System Design, API Design, Performance Tuning, Debugging

PROFESSIONAL EXPERIENCE

Backend Developer — Wizcommerce

Gurgaon, India | Apr 2025 – Present

- Built and maintained 30+ REST APIs using FastAPI, improving data retrieval speed by 30%.
- Designed a multi-tenant backend so each client's data stays private and isolated, while keeping the system easy to scale.
- Added Elasticsearch-based search, cutting search response time by about 40%.
- Used Celery to run long-running tasks in the background, keeping the API fast and responsive for users.
- Improved PostgreSQL queries and SQLAlchemy code, reducing database load by 25%.
- Set up centralized logging and Sentry alerts so issues are caught and fixed faster.

PROJECTS

LabLedger — Lab Report Reader & Health Tracker

[GitHub](#)

- Built a tool that reads lab report PDFs from any lab, extracts each test result, converts units, and matches it to a standard medical code (LOINC), flagging critical or fast-changing values.
- Built the backend with Python, FastAPI, and MongoDB, using a background worker so uploaded files process without slowing down the app.
- Added role-based access (owner, clinician, nurse, viewer) so only the right people can view or confirm medical data, plus audit logging and two-factor login for security.

Carabiner — Security Scanner for Codebases

[GitHub](#)

- Built and published a command-line security tool (pip install carabiner-sec) that scans a repo's CI/CD config, Docker files, and code for common security mistakes.
- Solved the real adoption problem with these tools: instead of dumping hundreds of old warnings on day one, it locks in existing issues as a baseline so teams only get alerted on new problems going forward.
- Added a drill mode that goes beyond checking settings, actually testing controls (like planting a fake secret) to prove they really block it, not just that they look configured.

AI Quiz Platform (QuizNest)

[Live Demo](#)

- Built a full-stack quiz app with email/password login, Google sign-in, and role-based access for students and admins, backed by REST APIs and MongoDB models for quizzes, scores, and progress.
- Used Google Gemini AI to auto-generate quiz questions on any topic and grade written answers.

EDUCATION

B.Tech in Computer Science Engineering — Chitkara University, India

2022 – 2026

CGPA: 9.02

Senior Secondary (CBSE) — Cambridge International School

2020 – 2022

CGPA: 9.30
